## BUILT HTML PAGE

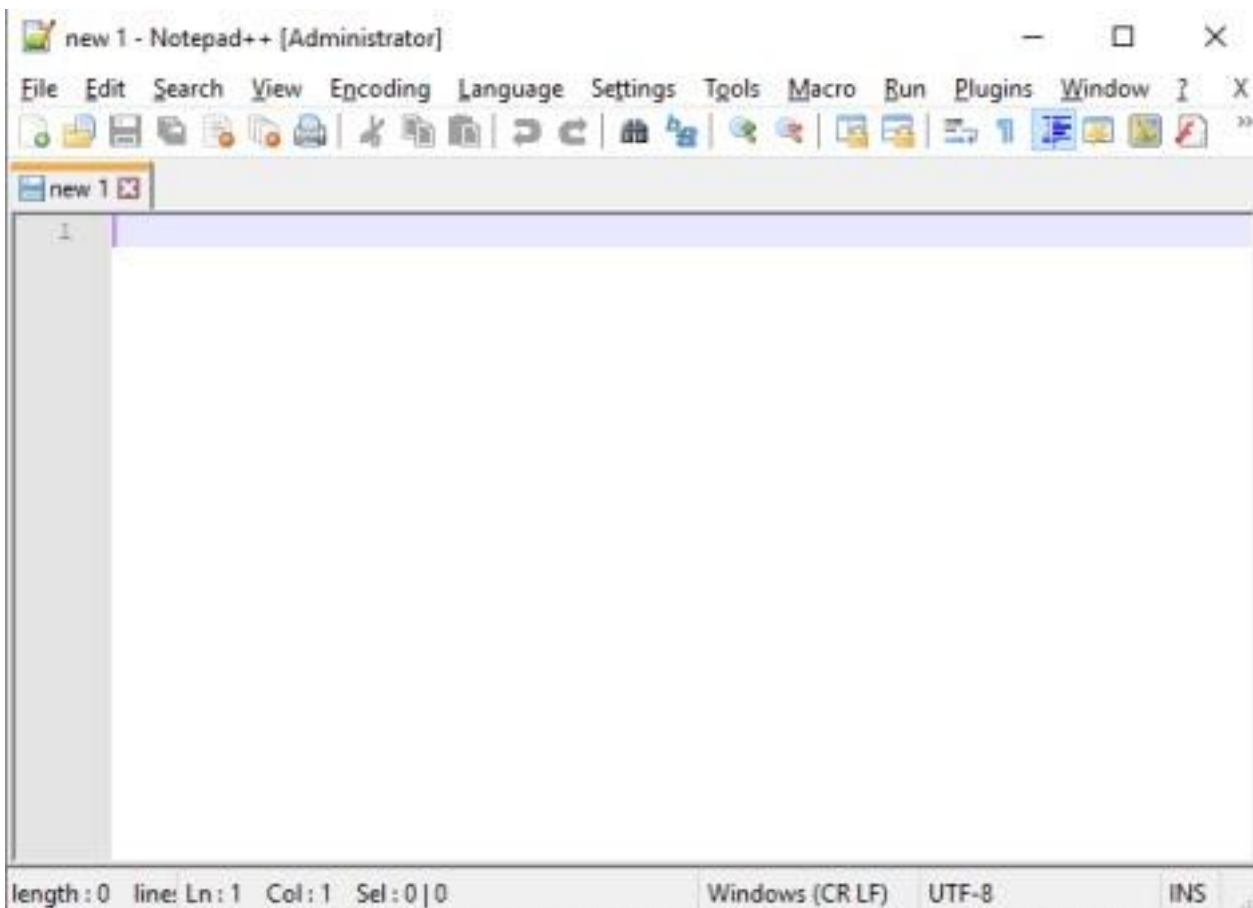

### Step 1: Open the Text Editor

In this step, we have to open any text editor such as Notepad or Notepad++ for writing an HTML code

### Step 2: Type the HTML code.

In this step, we have to type the HTML code in the text editor

1. < HTML >
2. < HEAD >
3. <!--

- The Head tag is used to create a title of web page, CSS syntax for a web page, and helps in written a JavaScript code. -->

4. **</HEAD >**

5. **< BODY >**

6. **<!--**

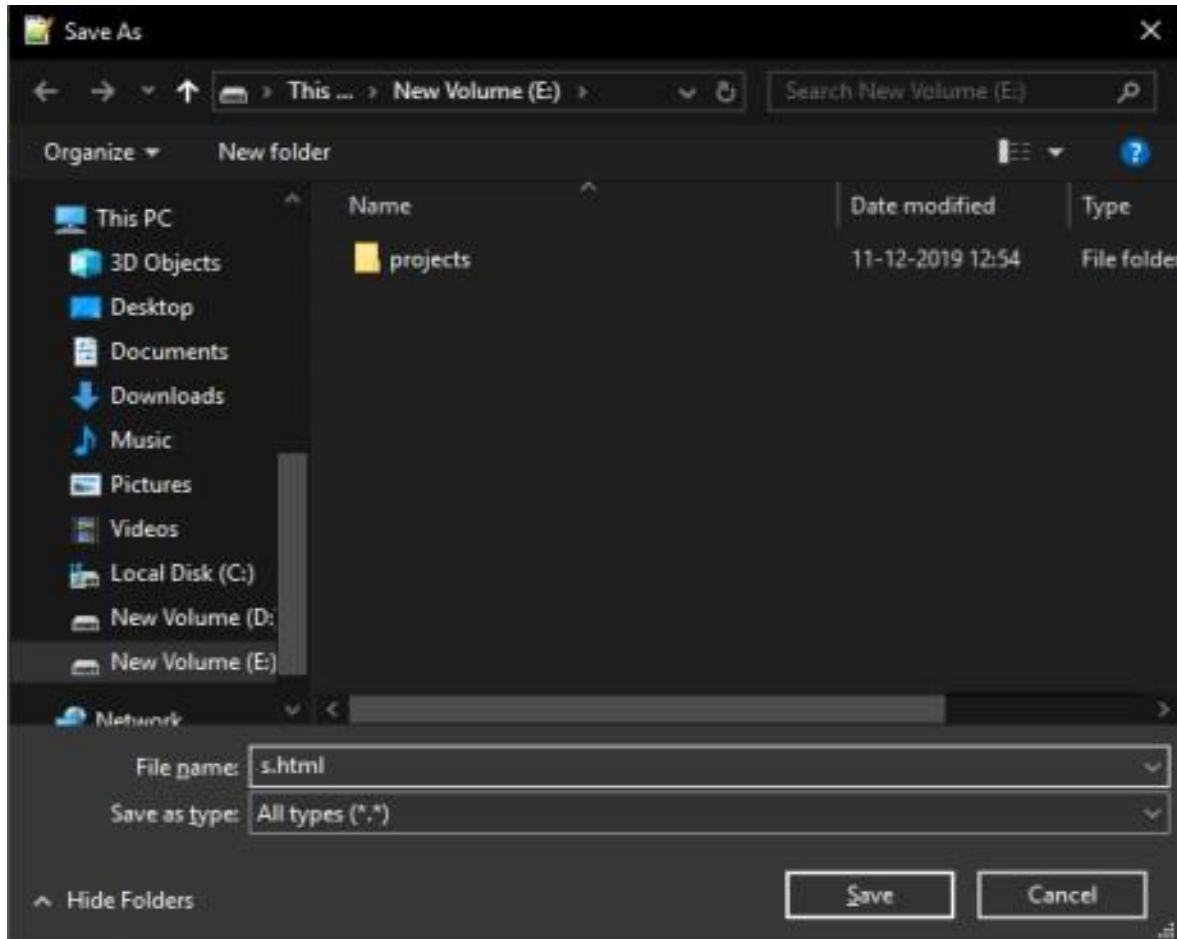

- The Body tag is used to display the content on a web page, which is specified between the body tag. -->

7. **</BODY >**

8. **</HTML>** **<!--** It is the opening tag of any HTML -->

## Step 3: Save the HTML code.

After typing the complete HTML code, we have to save that file in a folder with **.html** extension.

## Step 4: Run the HTML file.

At the last step, we have to execute or run an HTML file from the location where we saved the file. The file will run on a default browser.
